

TAKE 5 FOR SAFETY

1

STOP AND THINK

Pause and consider the task, equipment and environment

2

LOOK AND IDENTIFY

Scan your work area for any immediate hazards

3

ASSESS THE RISK

For each hazard identified, determine what could realistically go wrong and assess the severity of the outcome.

4

CONTROL THE HAZARD

implement practical control measures to eliminate or minimise the risk

5

MONITOR

Continue to monitor the task as you work, as conditions can change quickly. Keep an eye out for any new hazards that may appear.
